LiLith – Web Application Auditing

---

## SUMMARY

## DETAILS

LiLith is a tool written in Perl to audit web applications. This tool analyses web pages and looks for HTML <form> tags , which often refer to dynamic pages that might be subject to sql injection or other flaws.

It works as an ordinary web spider and analyses any grabbed web pages digging out <form> tags and following hyperlinks. It dissects <form>'s in a web page and if requested (default, can be switched off using "-i") inject special characters that have a special meaning to any underlying platform.

It doesn't care about default installed programs and/or scripts. To audit these vulnerabilities, please use a scanner like Nikto or N-Stealth.

Since the nature of the differences in Web Applications, a scanner can never perform a full 100% audit. Therefore, a manual recheck is necessary. Also, be aware that LiLith might come up with several false positives.

## ADDITIONAL INFORMATION

Securiteam: [TOOL] LiLith – Web Application Auditing

The information has been provided by <mailto:michael@scanit.be> Michael Hendrickx.

The tool can be downloaded from: <<http://angelo.scanit.biz/>>
