netUstad, Network Management Tool

SUMMARY

DETAILS

To ease the task of network administration, decrease the likelihood of erroneous command execution and to maintain all network services from a central point, EnderUNIX SDT announces the availability of its 9th open-source tool, netUstad.

The tool, designed and coded by one of our developers Ozkan KIRIK, has the capability to generate IPFW rulesets. It has been coded in C language and includes its own HTTP server.

The newly announced version provides a web interface for system administrators to add/delete/update IPFW rulesets. You can manage your IPFW firewall via a TCP/IP connected remote PC, easily.

Development version includes modules to manage whole network services (routing tables, network interfaces).

ADDITIONAL INFORMATION

The tool is available for download from:
