Airpwn – 802.11b Injection Tool

SUMMARY

DETAILS

<<http://www.evilscheme.org/defcon/>> Airpwn is a platform for injection of application layer data on an 802.11b network.

How does it work?

Airpwn requires two 802.11b interfaces, one for listening, and another for injecting. It uses a configuration file with multiple configuration sections to respond to specific data packets with arbitrary content. For example, in the HTML example, we look for any TCP data packets starting with "GET" or "POST" and respond with a valid server response.

ADDITIONAL INFORMATION

The tool can be downloaded from: <<http://sf.net/projects/airpwn/>>
