FileZilla Server Terminal Buffer Overflow

---

## SUMMARY

<<http://filezilla.sourceforge.net/>> FileZilla is "a free, open source FTP client for Windows. It supports FTP, SFTP, and FTPS (FTP over SSL/TLS). The <<http://sourceforge.net/projects/filezilla/>> FileZilla Server has a user interface that is used to configure and monitor the FileZilla Server".

A buffer overflow vulnerability has been discovered in FileZilla server terminal program allowing attackers to cause the process initiated by the server to crash.

## DETAILS

Vulnerable Systems:

\* FileZilla Server Terminal version 0.9.4d.

By sending a long USER FTP command to the FileZilla Server an attacker may cause the FileZilla Server Terminal process to crash (the FileZilla Server itself does not crash).

Proof of Concept:

\* Start the FileZilla Server

## Securiteam: [NT] FileZilla Server Terminal Buffer Overflow

- \* Start the FileZilla Server Terminal and login to the FileZilla Server started in step 1
- \* Send the following USER commands; "USER A", "USER AA", "USER AAA" etc incrementing by one letter ("A") in the command
- \* The FileZilla Server Terminal usually crashes between 900 and 3000 "A"s'
