QUALCOMM Eudora WorldMail Remote Management Heap Overflow

SUMMARY

A vulnerability allows attackers to execute arbitrary code on vulnerable installations of Eudora WorldMail. Authentication is not required to exploit this vulnerability.

DETAILS

Vulnerable Systems:

- * Eudora WorldMail version 3.1.x Mail Management Server

The specific flaw exists during the parsing of successive delimiters within the Mail Management Server, MAILMA.exe, listening on TCP port 106. Processing a maliciously crafted request can result in an exploitable heap corruption.

Vendor Response:

QUALCOMM will not be addressing this issue with a software patch and instead recommends that administrators block access to the affected port from untrusted sources at the network level.

[NT] QUALCOMM Eudora WorldMail Remote Management Heap Overflow

Disclosure Timeline:

2006.09.15 – Vulnerability reported to vendor

2006.12.12 – Digital Vaccine released to TippingPoint customers

2007.01.05 – Public release of advisory
