## Problem

-----

The attached OpenType font file will cause Windows to restart immediately when the file is opened by the default viewer (fontview). I doubt anyone would suspect a "harmless" little font file of being able to cause such a thing to happen!

## Software affected

-----

It has been tested on both Windows 2000 and Windows XP with exactly the same result -- an immediate restart. Other versions of Windows are untested.

## Fix

---

No fix known.
