Hi

According to me its mainly due the lack of memory ..

Regds

Subject: OpenSSH 3.8 'resource temporarily unavailable' error on windows 2k

we run openSSH 3.8 on windows 2000 ADS

recently often receive client's complaint that they cannot connect server.

look into windows event log (application) there's many logs like this from sshd

Cygwin process id =0x5A4

error : fork : resource temporarily unavailable

every time it occur, I restart openssh, the error went away for several hours.

Being responsible for over 50 servers like this, I 'm now worried , tired and have no idea why this happen, pls give me some suggestion

Best regards,

Mao Yanqiu
