July 24th, 2005 <http://www.debian.org/security/faq>  
-----

Package : libnet-server-perl  
Vulnerability : format string  
Problem type : remote  
Debian-specific: no  
CVE ID : CVE-2005-1127  
Debian Bug : 378640

Peter Bieringer discovered that the "log" function in the Net::Server Perl module, an extensible, general perl server engine, is not safe against format string exploits.

The old stable distribution (woody) does not contain this package.

For the stable distribution (sarge) this problem has been fixed in version 0.87-3sarge1.

For the unstable distribution (sid) this problem has been fixed in version 0.89-1.

We recommend that you upgrade your libnet-server-perl package.

## Upgrade Instructions

---

wget url  
will fetch the file for you  
dpkg -i file.deb  
will install the referenced file.

[SECURITY] [DSA 1122-1] New Net::Server packages fix denial of service

If you are using the apt-get package manager, use the line for sources.list as given below:

apt-get update  
will update the internal database  
apt-get upgrade  
will install corrected packages

You may use an automated update by adding the resources from the footer to the proper configuration.

Debian GNU/Linux 3.1 alias sarge
