

Did I get hacked?

The entire contents of my /home/grant/vmware folder have suddenly disappeared. I haven't noticed anything else strange yet. I did configure and start shorewall for the first time yesterday instead of using a few iptables commands from the Gentoo Home Router Guide, and I'm running PenguinTV (a video RSS aggregator with an ebuild in bugs.gentoo.org) and transmission (a bittorrent client in portage) for the first time. My shorewall config is here:

http://archives.gentoo.org/gentoo-user/msg_108375.xml

What should I do next?

– Grant
