I checked them, I can download the file from

<http://download.microsoft.com/download/xml/security/1.0/nt5/en-us/mssecure.c>

ab

extracted it in the same directory with the exe. But I still get the below error. I've tried `hfnetchk -v -z -x s:\security\hotfixfile.xml` without any change

The server that I'm trying to run it on is a NT 4.0 SP6a with MS01-044 installed.

Take Care and Have Fun

I would check the TCP/IP settings of the two machines that are having problems. I am currently testing the program and I am not having any issues. First things I would check are the Default Gateway, Subnet Mask, DNS servers.

SecurityFocus Microsoft: RE: MS patch-scanner for Win-NT, 2K, I

Hi, I get the following error message (2 out of 3 systems) when I try to run the MS patch-scanner: <<Start>> hfnetchk -x mssecure.xml Microsoft Network Security Hotfix Checker, 3.1 Developed for Microsoft by Shavlik Technologies, LLC info@shavlik.com (www.shavlik.com) Unable to load the XML file from the following location - mssecure.xml Possible reasons: - Your machine is not connected to the network. - The XML file is temporarily unavailable. - The XML file could not be found at the specified location. - The XML filename and/or path is not correct. <<End>> I get the same error message on a W2K Prof. Workstation (SP 2) and on a NT 4 Server (SP6a), but the scanner works fine on a W2K Server (test server). So the XML file is downloaded from Microsoft without problems and works fine with the W2K Server. The possible reasons mentioned in the error message don't make sense to me... :(Any idea how I can get rid of this problem? Any help appreciated. Regards, Tom Schmidt
