Well, had problems w/ SP3, but not a blue screen...

Upon installation, I was effectively cut off from the net. None of my browsers (Netscape, IE, Opera) were able to access anything outside of the files I had locally on my hard drive. My AIM, ICQ, mIRC, BulletProof FTP, Abyss Web Server, and MSN Messenger were all working just fine w/ the net (I was actually talking with some others when I noticed I couldn't get on the net). I don't know what happened, but I promptly uninstalled it, thank God I had chosen to archive the files, which I was actually debating doing...
