I saw also someone talking about securing up web application. Most AV software carries on also a command line version of antivirus. Launching this CL application after a file submission won't be a bad thing. May be a bit excessive for someone but I would suggest this solution.

Cheers

Oggetto: RE: Should web servers, eg. IIS 6 have anti-virus installed on them?

ALWAYS, ALWAYS, ALWAYS install anti-virus software.
Configure it to avoid databases, log files, or other commonly locked files, but get it on there!
Lock it down and harden it too. And if you can, create a script or use a package to verify that nothing has changed on your webpages, or alert you if it does.

Cheers!
Mark

Subject: Should web servers, eg. IIS 6 have anti-virus installed on them?

Greetings

Should IIS have anti-virus installed on them. I know I would do it for a fileserver but for IIS, I rather lock it down.

Thanks.
/Gill
