Valerie,

I hit the "send" on that last email too quickly..

I restarted SKIP on both sides and now I see the CDP which seems to work:

On the ss, the skipd.log says:

Thu Oct 4 11:40:59 2001 action=get nsid=8 mkid=90b299b8b1xxxx

cert=NULL response=getok (1 cert)

Thu Oct 4 11:41:00 2001 Calculating Shared secret for 4fd3a1eec3axxxxxx

However, the login still doesn't work.

So some kind of cert exchange is working, but then it grinds to a halt..

(Surely a cert exchange should not be needed, since I add the certs to each side?)

Sean
