Subject: BIND

Date: Thu, 18 Oct 2001 22:13:01 GMT

Sort of in this vein, is anyone here using djbdns in a large ISP environment? I'd like to switch over to it, since I'm sick to death of BIND and it's continued bugginess/insecurity, but we host a couple of thousand customer domains, and I've not been able to find a real 'cookbook' for converting 'en masse'...

just curious.
