Hi,

I have to role out Openssh 3.0.2 on solaris 7 (sparc) on five machines. Does anyone know of a site or has a package in (.tar) format so that i can install it. Cause after going to the solaris openssh implementation found on Sun's site i found i have to install many things

- 1) zlib
- 2) perl
- 3) openssl
- 4) openssh
- 5) prndg

DO i require to install the gcc library or comes default iwth solria 7

It becomes a pain installing step by step. I am going to install it the first time in my lab.

Or does anyone know of any good document for installing it.

Regards

Stephen Pinto
