Many thanks to all those who pointed me at lofiadm (was there all the time!)

```
dd if=raw-dev | ./nc host port
```

```
with diagnostic host  
nc -l -p port > root.dd
```

```
followed by  
lofiadm -a /disk/root.dd
```

```
and  
mount -o ro /dev/lofi/1 /mnt/diagnostic
```

all works brilliantly.

Many thanks  
Neil
