Hi,

From time to time I get a msg on /dev/console similar to the following:

AUDIT: Sun Jan 6 00:53:35 2002: 434 X: client 19 rejected from IP xxx.xxx.xxx.xxx port 1025

I have no clear understanding of what this means, what generates this message and how/what needs to be set to control when and what messages are displayed under what circumstances (i.e I dont know nuttin').

A pointer to the appropriate RTFM would be appreciated

ENV: Solaris 8, SS U-10.

Cheers,

Andy
