hello

We have setup the following network structure:

host.A <<===>> (hme0) fw.A (hme1) <<===>> (hme1) fw.B (hme0) <<===>>
host.B

fw.A and fw.B both run SunScreen 3.1, traffic between fw.A and fw.B is sent over an encrypted VPN.

All interfaces are in routing mode (not stealth)

Some troubleshooting is required... so:

I want to ping host.B from fw.A. I want the packet to originate from the firewall's private interface (hme0) and go through the VPN. How do I do that ?

I'd also like to snoop on the VPN's traffic only. If I'm right there is no "virtual interface" tied to the VPN so I can't use snoop's "-d" switch. How ?

Thanks in advance

alex
