To: Focus on Sun Mailing List <[FOCUS-SUN@SECURITYFOCUS.COM](mailto:FOCUS-SUN@SECURITYFOCUS.COM)>

I'm a bit behind in announcing these two BluePrints as they were made available on Jan 21st. Will keep this announcement brief:

**Securing Sun Fire 15k Domains:** This article provides recommendations on how to securely deploy Sun Fire 15k (aka StarCat) domains. These recommendations apply to environments concerned with security and particularly those where the uptime requirements of the domains and/or the information on the domains is critical to the organization. The configuration documented in this article is supported by Sun. Available here:

<http://www.sun.com/blueprints/0102/sunfire15k2.html> or

<http://www.sun.com/blueprints/0102/sunfire15k2.pdf>

**Configuring OpenSSH for the Solaris Operating Environment:** The network environment was never safe. As more users connect to open networks for remote access, the risks of compromising systems and accounts increase. Secure network tools such as OpenSSH counter the threats of password theft, session hijacking, and other network attacks. These tools require planning, configuration, and integration. This article deals with server and client configurations, key management, and integration into existing environments for the Solaris[tm] Operating Environment (OE). Available here:

<http://www.sun.com/blueprints/0102/configssh.pdf> or

<http://www.sun.com/blueprints/0102/configssh.pdf>

Many thanks for Jason M Reid and Dina (Kurktchi) Nimeh for making these articles possible.

As always – all the security-related BluePrints can be found at:

<http://www.sun.com/security/blueprints>

–Alex
