I'd point out to the customer that there are ways to brute-force the username and password. If someone were to find a legitimate username and password by brute-force, then they could exploit whatever holes his IIS installation has – Unicode or otherwise.

(You'll find a HTTP-Auth brute-forcer program called ObiWaN at <http://www.phenoelit.de/obiwan/>)

BRYAN

Subject: IIS/Unicode and authentication box

I am trying to show to a customer that his IIS server is vulnerable to unicode exploits. However, access to his server is password protected

(Require valid-user) I get "HTTP/1.1 401 Access Denied" and "You are not authorized to view this page".

As far as I am concerned, having password box does mean he does not have to patch his web server. How can I show that his box is vulnerable? Anybody?

```
print chr hex for qw +
2D 2D 0A 76 6C 61 64 69 6D 69 72 40 61 72 6F 62 61 73 2E 6E 65 74 0A
44 38
```
