For all you scripters, there's a really easy, albeit very uncool, way of doing this.

Firstly, use `-oM` instead of `-oN`. A bit of editing to remove the `))))`, etc. Then import the file into good 'ol Excel, being careful how you break up the lines into columns. After that you can sort the data any way you like, count whatever you like. You don't need a different script for every different sort or count. I've done this many many times, takes only five minutes to get your result.

Hands up if I've converted anyone!

Regards

Viraf

Subject: How to aggregate output of NMAP

I used `nmap -sS -p80,25,110,21 172.31.*.* -oN output`
do you know if exist any tool to summarize the result in order to know (for example):

how may WEB answered
who are the web server

hom many FTP
who are ftp

I used nlog....any other tool?
