Hi,

There are many resources available on the web about Social Engineering (including NLP – my new hobby) – you can find them on google very quickly. But most of them contain "what is SE", some examples and references to other sites with the same stuff.

Anyway ,as far as my research has gone I could not find any paper on A FORMAL METHODOLOGY for conducting Social Engineering Assessments.

In any audit if you do not follow a methodology you cannot guarantee for quality of the work.

So, could anybody give us an advice?

Best Regards,
Ilici R
