You should try tseenum.exe from the great and mighty Thor www.hammerofgod.com

Hit any box in the domain and it will enumerate the role of all the servers. It rocks!

Thor is currently modifying the code to add a few new features that will "rock the house"

On a completely random and happy note; I would like to say "cheers" to the guys making free tools that we all use in our testing of MS environment tool makers of the world...

Thanks to chip, arne, thor, david, jd, robin, roleof, ews, todd s, rfp, schiffman et al, marc et al, maceo and of course LeBlanc. Thanks guys, I for one appreciate it.

Erik B
