You've also got netstumbler (ministumbler for pocketPC) (www.netstumbler.com) And my personal favorite, Kismet (www.kismetwirless.net) for linux (or linux on ipaq)

> Hello, there, I am looking for anyone who has had experience with a combined (pref. PDA) device for signal detection/analysis. I am familiar with the Fluke Ipaq-based product (<http://www.flukenetworks.com/us/LAN/Handheld+Testers/WaveRunner/Overview.htm>), but it is quite expensive (app. \$2500 US or more). The rogue AP detection is a crucial part of this. Any thoughts?
