Eigen,

I seem to recall there being a demo/etc about tscrack at the Blackhat 2002/Vegas, though I'm not completely sure. Thor has a bunch of TS utilities (TSEnum, TSGrinder, ProbeTS, etc) on his site:

<http://www.hammerofgod.com>

TSCRack is supposed to be at:

<http://softlabs.spacebitch.com/tscrack>

But I'm getting DNS timeouts— might be something on my end though.

Greetings, group!

I am de-lurking to inquire if anyone has some pointers on Microsoft Terminal Services. I'm testing a client who allows 3389 into their terminal server for the Remote Desktop Client.

Other than the Bad Thing of allowing inbound traffic onto their LAN, I'm trying to hunt down ways to enter all the way in. I have seen TSCRack referenced, but the program is nowhere to be found.

Any suggestions gratefully received.

Eigen
