All,

Each year which the Cansec West security conference rolls around I post to this list lauding it's excellence. This year is no exception. If you're looking for a strong technical track conference with a strong emphasis on penetration testing and cutting edge research it's tough to beat Cansec. It's also on the Canadian dollar which to most (unless your a Canadian) is good news given it's depressed state compared to the Euro and the USD.

This year they are also offering small classroom instruction on topics near and dear to the pen-testers heart. I've listed the URL below in addition to the teachers and courses listed so far.
