Hello Dan,

I think you'll find this thread to be relevant:

<http://seclists.org/lists/pen-test/2004/Dec/0066.html>

Subject: ISO: Penetration Test Hardware Vendor

All – I'm looking to find if anyone makes specific hardware for penetration testing. Specifically a laptop. I already know that the 'more is the better' in configuring a COTS machine, but I'm looking to see if anyone makes one already 'tricked-out' so to say. I'm not looking for advice on specs, I can pretty much guess that (ie – as much RAM and fastest processor as you can squeeze into a tiny box, oh and the biggest HD possible, yeah and a 1600x1200 ...).

Thanks in advance

Dan Berberich
