This is what you want to fix your tcpip.sys 10 connection prob.

Hello,

On nmap.org you'll be able to download the latest nmap which is IMHO a better tool and you'll be able to read about the differences that were implemented in the SP2 TCP/IP stack which causes the problem you encounter and how to partly by-pass them.

Hope it helps,

Guillaume

Subject: superscan on win2k vs winxp

hello friends!!

I am using superscan to scan hosts for possible open ports. But surprsingly ,if i scan it from windows 2000 and windows xp with sp2 the results differ.

When i scan from xp it gives no open ports and when i scan from windows 2000, it gives certain ports open.

RE: superscan on win2k vs winxp

SecurityFocus Penetration: RE: superscan on win2k vs winxp

Does anyone have any idea regarding this?

If tcp/ip stack is implemented differently on both the opertaing systems then can anyone tell me how i can get tcp/ip stack info on my xp and 2k machine?

I think superscan is multithreaded ,can anyone suggest me other multithreaded scanners?

Regards,
Pavan Shah.

Audit your website security with Acunetix Web Vulnerability Scanner:

Hackers are concentrating their efforts on attacking applications on your website. Up to 75% of cyber attacks are launched on shopping carts, forms, login pages, dynamic content etc. Firewalls, SSL and locked-down servers are futile against web application hacking. Check your website for vulnerabilities to SQL injection, Cross site scripting and other web attacks before hackers do!
