Hi Folks,

We're looking at having a vulnerability assessment done on our PBX, and I'd like to get a feel for what it might cost.

Specifically, we're looking to have the following accomplished:

- * PBX configuration reviewed for any misconfigurations that could result in a compromise
- * A check of approximately 1000 phone numbers (war-dialing) to detect the presence of any modems or other devices set to auto-answer
- * A review of logging capabilities and configurations on the PBX to ensure that all call details are being properly logged
- * Verification that all userids/passwords on the PBX are being changed according to company policies

If anyone has done these sorts of tests on a PBX before and wouldn't mind sharing what a ballpark estimate might cost, we'd be most appreciative. If not dollars, then possibly hours required to perform an adequate review and test.

Thanks in advance,
-Mike.

Audit your website security with Acunetix Web Vulnerability Scanner:

Hackers are concentrating their efforts on attacking applications on your website. Up to 75% of cyber attacks are launched on shopping carts, forms, login pages, dynamic content etc. Firewalls, SSL and locked-down servers are futile against web application hacking. Check your website for vulnerabilities to SQL injection, Cross site scripting and other web attacks before hackers do! Download Trial at:
