Hi everyone,

I was thinking about if a certain penetration test scenario was applicable. What if there was a target PC (that has no IP) connected to a printer through a parallel cable, where the printer has an IP and you had access to this printer through the network. Would you be able to compromise the connected target PC if you gained control of the printer? If so how. and if not why?

I tried looking for an answer but to no avail.

Thank you and regards,
Majed Saif

Audit your website security with Acunetix Web Vulnerability Scanner:

Hackers are concentrating their efforts on attacking applications on your website. Up to 75% of cyber attacks are launched on shopping carts, forms, login pages, dynamic content etc. Firewalls, SSL and locked-down servers are futile against web application hacking. Check your website for vulnerabilities to SQL injection, Cross site scripting and other web attacks before hackers do! Download Trial at:
