Gary,

If you like livehttp, check out tamper data  
<https://addons.mozilla.org/extensions/moreinfo.php?id=966>

cheers  
Ivan

Hi Ivan,

Google search, yes I did, I already have that plugin (great plugin), but was looking for a way to mass save cookie information for later use by another program, without having to copy/paste each cookie.

Since I've posted, I've found a nice firefox plugin called LiveHTTPHeaders that will dump all http header information and then I can save everything to a file. I was then going to write a script to parse the cookie information out for my purposes.

I'd be interested in any other ideas about saving cookie state without individual copy/paste as some sites have a lot of cookies.

Re: saving session cookies?

Does anyone know of a way to save session cookies for later use (ie. for load into curl).

Yes, I know this is not the design of session cookies, but nonetheless, looking to see if there is anything already out there.

ie. firefox plugin, any proxy tools that do this (paros, webscarab), etc.
