Read here:

[http://blog.tenablesecurity.com/2007/02/udp\\_service\\_and.html](http://blog.tenablesecurity.com/2007/02/udp_service_and.html)

This should help you understand why if you do a generic UDP portscan you should not exceed 1 port per second. If the server OS rate limits the ICMP code3 type 3 messages, your scanner may think the port is open.

Dennis

Read the documentation.  
You can also join #Unicornscan on EFnet.

Thanks everyone for inputs...

I'm excited about unicornscan however I get this error:  
/usr/bin/ld: cannot find -lnet

RE: Fast UDP scan

when doing make...

I'm running Fedora Core 5 so am not able to install the Linux RPM too..

Any idea what's going wrong?

Yes he's looking for Unicornscan, but unicornscan.org is down. You can find it here:  
Linux rpm:

<http://rpmfind.net/linux/RPM/sourceforge/o/os/osace/unicornscan-0.4.2-0.i386.html>

or integrated in the OSSTMM Security Audit Correlation Engine there:  
<http://sourceforge.net/projects/osace>  
FreeBSD:

<http://www.freebsd.org/cgi/cvsweb.cgi/ports/security/unicornscan/>

Hi Group:

Is there a way to increase speed of UDP scan?

RE: Fast UDP scan

2

RE: Fast UDP scan

I'm running a full UDP scan since 3 days on  
3 IP

addresses and it

is still not complete.  
I gave following command:

```
nmap -sU -p1-65535 -PO xxx.yyy.zzz.aaa
```

One way I can think of is is running parallel

nmap

scans by dividing ports like:

```
nmap -sU -p1-30000 -PO xxx.yyy.zzz.aaa  
nmap -sU
```

```
-p30000-65535 -PO
```

```
xxx.yyy.zzz.aaa
```

Would appreciate some inputs on this.

Regards
