I dont know what you mean by a common exploit... that port is not a standard port number, as opposed to 21 for ftp, 22 for ssh, 23 for telnet, 80 for http etc...

I am not aware of anything relating to that particular port and was unable to find any information in a pretty extensive search...perhaps if you could provide some more specific information, such as if this is based on an attack you are experiencing, the relevant logs or something a bit more substantial?

Subject: Port 1145

Anyone know what common exploit is on port 1145?

Thank you,

Greg
