you are going to have to create a virus scanning boot disk from a clean workstation.....and scan and remove the virus from the boot disk...also make the boot disk write protected so that it can't be infected.

Subject: cannot clean my machine..

Hi, people.

First of all sorry for my english.

I have some trouble with win98 which is infected.

When I checked it with my antivirus (Kaspersky lab and virus database is up-to-date) it says something like "worm i hybrid.b".

But my antivirus program cannot heal infected files.

I have 50% of my FS infected..

Please, any help is welcomed.

Maybe anybody knows any good program which can heal my files..

Thanks in advance.

trancer
