Hi Michael,

Before even considering the specifics of installing surveillance devices, do consider what you are trying to accomplish. Be clear as to what your company's intentions are. Are they to simply fire this individual or perhaps press charges. Perhaps you have already done this, but in either case I would advise you to review your company's HR policies before proceeding. Ensure that your HR policy specifically states that your employees may be closely monitored for internal security purposes. Also ensure that the suspect has signed off understanding and acceptance of these policies. If not, you may want to coordinate this operation with your company's lawyers as you may or may not be violating this individual's privacy rights, if any.

If your company does intend to press charges, I would encourage you to enlist the services of a computer forensic investigator to assist in collecting evidence that can be admissible in the court of law. There are very strict procedures that need to be followed in order to meet admissibility requirements. Also consider the possibility that this individual files a wrongful dismissal suit. Having evidence on your side collected in accordance with the law may help prevent the suit from progressing any further.

Also consider the possibility that once you begin monitoring this individual, you are witness to other, unrelated, criminal acts. You may be required by law to report this activity to the proper law enforcement authority. If proper procedure was not followed from the beginning, that evidence may or may not be admissible; making law enforcement's job that much more difficult.
