Running on windows? Spending money?

Windows – money:

WS_FTP Pro Server

WFTPD – Windows FTP Server

Windows – no money:

Cerebus

Cesar

WAR FTP Daemon

The pricey ones are significantly better, (and, yes, obviously, significantly more expensive)

If you are running *n*x operating system, I would recommend using scp over ssh. Same functionality as ftp, but encrypted. There are windows clients for this (WinSCP), I don't know about servers...

Personally recommend this as your number 1 option.

Most of the UNIX ftp clients are quite good too..

take your pick...

good, fast, cheap...
