i think i have come to a solution , where by we have locked that client out from all ISP's by notifying them before they sign him up. And they have followed what we have told him , so unless he is going to start his own ISP then i dont think he will receive any service from any ISP here.

cheers

Subject: RE: Locking Cisco Router

The point was made by the original person to post on this is that they have performed a service for someone involving the configuration of a Cisco router. They're intent from what I read out of their second post is that they would like to "unconfigure" the router and lock the owner out until the monies owed are paid. I believe the question has been answered by this point.

To the fellow with the original post, your only real option is legal action at this point. No need to get a bad reputation by doing a "write erase", "save config", "copy run start" and then a "reload". Depending on the amount owed, you'd have to decide what is an "acceptable loss" on this one.

Regards,

Kevin
