Subject: Is there such a thing as DNS Network Mapper type application

To give you an example, you tell it the ip or name of the name server you would like to use, then it does many lookups trying to find IPs based on the names. It looks up stuff like this:

fw.domain.com  
firewall.domain.com  
www.domain.com  
beta.domain.com  
apps.domain.com  
vpn.domain.com  
www2.domain.com  
intranet.domain.com  
db.domain.com  
zeus.domain.com  
berlin.domain.com  
test.domain.com

You get this idea...

thanks!

David
