Windows has a tool that is more robust than netstat, it's called Port Reporter – PortRptr.

See:

<http://www.microsoft.com/downloads/details.aspx?FamilyID=69ba779b-bae9-4243-b9d6-63e62b4bcd2e&displaylang=en>

Thanks,

Teo

Subject: RE: a tool like nestat

Hi there Juan,

What version of windows are you using (I presume you are using windows as

you refer to netstat)?

It is possible to track what application is using what port using the process number, all doable via a standard XP box in DOS.

If you are more interested, let me know and I will find the thread

(which

admittedly is around a year old now) which refers to how to do this.

Kindest of regards,

Hamish Stanaway, CEO
