

Re: How to stop Admins from sniffing ?

have a personal firewall installed which pop's up every few minutes saying that there is a port scan attack going on. And when i looked up that IP address it belongs to the system being used by the administrator. I have tried talking to my bosses about this but not happened (maybe the admins convinced them that they are not doing anything like that or its happening by bosses permisson). i know since they are in same network as me its easy for them to sniff all traffic and everything.

What i want to know from you ppl is that is there is anyway way to stop this ? is it possible for me to encrypt all traffic going out from my system ?
I have never used a Anti-Sniffer but can they help ? any way out ?

Thanks in advance
Jeff
