Hi all,

Firstly excuse my english, i'm spanish.

I'm trying to secure some AD servers and i have a problem.

I scan then (w2k3 AD Servers) with Retina and it says that i have "Null Session" enabled, so it shows all the domain users. (I'm doing with a machine out of the domain)

The problem is that if i look at the RestrictAnonymous and RestrictAnonymousSAM registry values, they are ok :-?

Someone knows why i can enumerate the domain users ???

I have also use SuperScan and the same happens.

Un saludo

Eneko
