I just got this email and thought you might want to take a look... I use GFI's S.E.L.M. and it's pretty good. You really need to tweak whatever product you choose so you don't get buried with "noise".

Subject: Log management as a service

I'm excited about the unique software-as-a-service model that Alert Logic leverages to deliver the first and only on-demand log management solution that gives you control without all the care and feeding of classic software and appliance solutions.

Join me for a free webinar sponsored by Alert Logic to learn how this on-demand approach can help you avoid the pain and workload typically associated with log management systems- without breaking the bank or overrunning your database.

This webinar session will cover:

- \* Log Management Challenges – Think before you leap – don't collect massive amounts of data only to overrun your database.
- \* Sustainable Audit Defense – Minimize your workload and ensure that you can respond to any auditor, any time with any data needed.
- \* Innovative approach – Learn how you can use the Alert Logic Log Manager on-demand platform to make your log management easy and affordable with the advanced capabilities you need at your fingertips from any browser.

After the presentation you will have the opportunity to ask me and Scott Hollis from Alert Logic questions about log management and the Alert Logic software-as-a-service approach.

Title: Log Management Made Easy

HP open view is cheap and works well. Data retention is poor, but you can keep a good years worth of logs.....

Subject: RE: Event Log Monitor Program

I'm looking for a good event log program that can consolidate all my event logs from my servers into one location.

I've been looking at EventTracker by Prism Microsystems <http://www.eventlogmanager.com/> and the ELM products by TNT Software <http://www.tntsoftware.com/Products/>.

I haven't used either, but like what I see from EventTracker.

Roger

Subject: Event Log Monitor Program

I'm looking for a good event log program that can consolidate all my event logs from my servers into one location. Then I can report on them and such. We purchased GFI Security Event Log Monitor but we find the program cumbersome at best and doesn't give you any insight on some of the event messages that are produced. I'd like to know if there is a freeware/opensource solution. I know GFI has recently come out with the Successor to SELM called EventsManager but we'd like to look into some other products that are out there first.

Any replies would be greatly appreciated.

Thank you,

Adam
