Small quick question.

I once used a tool that could crawl a web site and extract useful information for a initial RECON phase. Like phone numbers, fax numbers, email address and so on.

I cant find that tool anymore, I remember it was free. I tried to search a and got a bunch of paying software nothing coming close to what I want.

Any id?
(free would be essential)

Merci / Thanks

Vous pourriez imprimer ce courriel, mais faire pousser un arbre c'est long.
You could print this email, but it does takes a long time to grow trees.
