Good morning group!

I have a client that needs to generate reports on the email traffic and content for specific persons or groups in the company.

Equipment: Microsoft Exchange 2003. No planned migration to Exchange 2007 in the near future

Their need is two fold:

1- Generate reports on specific persons or groups in the company.  
Example: From today, divert/copy all incoming and outgoing mail from one or more mailboxes.

2- Forensic searches on specific people's email for the internal police force. Find deleted emails, look at traffic outbound and inbound. Duplicate all traffic to another (or phantom) mailbox for review by the detectives.

Of course all this manipulation must be stealth to the enduser.

They've bothered with the legal issues, lets not enter that in the discussion.

Thanks for your help!
