Michael,

Thanks for the support.

Because we perceive this as a security problem, our intent is to be wary of any web application that relies on IIS' session tracking. The same goes for ColdFusion.

I'm not too familiar with reporting bugtraq incidents, so I'm not sure where to take this thread from here. I've posted to this group, reported to CERT – if nobody else perceives this as a serious problem, I intend to let it stand as is.

Thanks,

Jeff
