Your IP address has nothing to do with their upload throttling, that is set in the modem itself, by the provider end of the connection, with SNMP. Run the docsdiag program on your modem, and you'll see the cap there. Example:

DocsDiag v011209 Copyright 2001 Robin Walker rdhw@cam.ac.uk

Toshiba DOCSIS Cable Modem: HW 6.11; SW 1.7.007

Downstream channel ID = 3
Downstream channel frequency = 415750000 Hz
Downstream received signal power = -1.5 dBmV
Upstream channel ID = 2
Upstream channel frequency = 26096342 Hz
QoS max upstream bandwidth = 192000 bps
QoS max downstream bandwidth = 1500000 bps
SigQu: Signal to Noise Ratio = 31.5 dB
Cable modem status = Operational
Upstream transmit signal power = 41.5 dBmV
Date and Time = 2002-02-05,23:47:17.00+00:00
Configuration filename = IP1.bin
