Come somebody advise me if there is a solution available that can meet our requirements.

We need a firewall like McAfee or the Microsoft firewall that will allow us to restrict all ports except a few when employees use their PC's at home. We also want to be able to have a second setting so when the same laptop is within the network ports can be opened up as the security is much higher. The firewall maybe switched off internally if a solutions like this does not exist.

Another requirement is that we can manage the firewall easily for example be able to use Ms group policy or McAfee e-policy to manage rules.

As you may be able to tell I'm not a huge techie and the requirements are not set in stone but any suggestions would be appreciated even is its just things that I should consider, the client is a big corporate so it has to be as secure as possible and as easy to manage as possible.
