The Acronis image setting on the external drive I was advised to buy for backup contains an image file of my computer while it was infected. It

also

contains an Outlook .pst and BCM file I need to retrieve. That image

file

was scanned by the mechanic who put it there and scanned twice by me

with

NOD32. But the file has never been restored to a condition that will

permit

me to remove selected files. I'm about to buy Acronis True Image 9.0

Home

just for that purpose (it was created with True Image). I don't know

what to

expect when I convert or restore that file. I obviously don't what it restored in the true sense of the word because the machine it's on has

been

reformatted, most of the programs and user files reinstalled, and is

running
